

**WE TEACH
NEWCOMERS IN
DENMARK WEB
DEVELOPMENT
AND CONNECT
THEM TO THE
JOB MARKET.**

VOLUNTARILY.

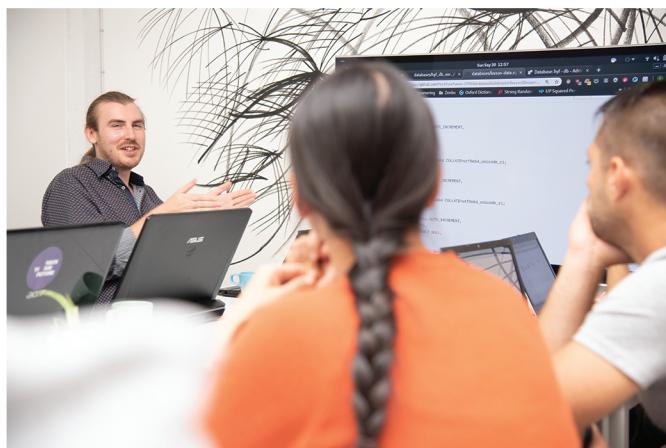

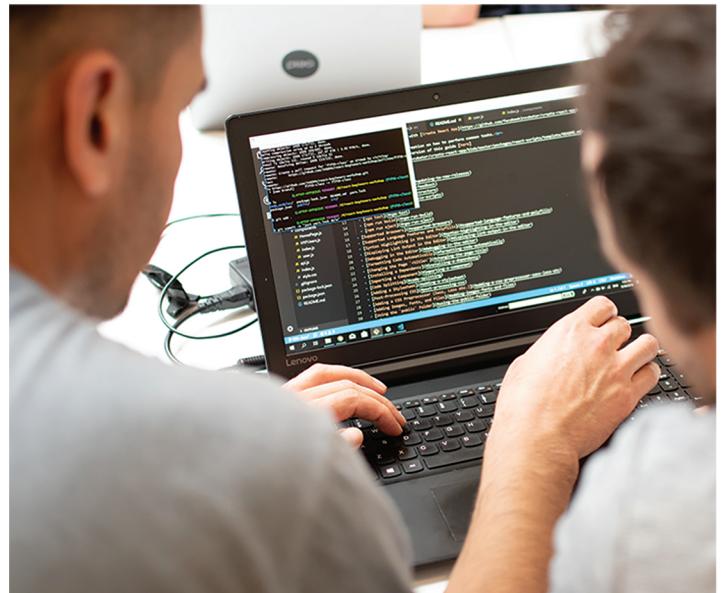

**HACK
YOUR
FUTURE**

WHO WE ARE

HackYourFuture is a coding school teaching computer programming to refugees. Our aim is to empower our students through code and to enable them to work as web-developers. With our team of 45+ volunteer IT-professionals in Denmark we have created a 7-month program in which our students learn the fundamentals of web-development. After graduating we guide them towards work via our network.

THE PROGRAM

The program is focused very specifically on teaching our students the most relevant frameworks and in-demand skills on the current job market. We teach both front and back-end programming with JavaScript as a dominant language. Our focus lies on making our students independent coders with great problem solving skills. Additionally we train our students in project management and communicating in a team. Our program has a project oriented approach and after graduating the students will have built various projects and added them to their online GitHub portfolios.

REQUIREMENTS

Students will need to be able to write and read English at a good level. With 25 hours of course work per week we require students to be very motivated and driven to become web-developers.

GRADUATES' PROFILE

Graduates of our program will be able to understand the architecture and build working products in one of the most popular technology stacks of the time: Javascript, Express and React.

HOW DO WE TEACH?

In our 7-month program we teach students to become full-stack web-developers. They learn programming languages and related frameworks such as HTML/ CSS, Javascript, Git, React, Node.js and MySQL with Express. Each week on Sunday we host a 4-hour workshop in which students learn from experienced local developers. The rest of the week students work on projects at home and with online help from our mentors (25 hours per week).
